Comparaisons

Figure 1 Total costs of mental illness (England, 2002/03)

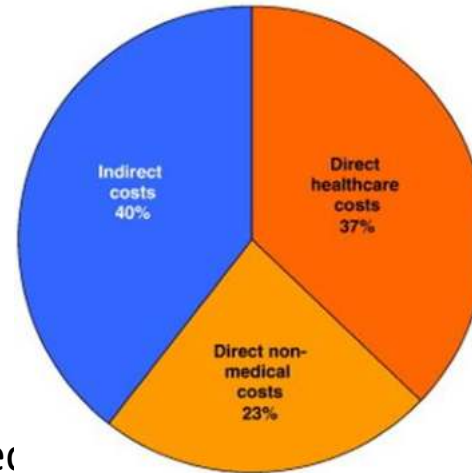

The 2013 Chief Medical Officer's report estimated that the wider costs of mental health problems to the UK economy are £70–100 billion per year – 4.5% of gross domestic product (GDP).

However, estimating this figure is very complex and an earlier study carried out by Centre for Mental Health found that, taking into account reduced quality of life, the annual costs in England alone were £105.2 billion.

A) Total disorders of the brain

B) Neurological disorders

C) Mental disorders

For the EU, a region with highly developed healthcare systems, the direct and indirect costs were estimated at €798 billion. Both direct and indirect costs of mental disorders are expected to double by 2030
